

ABSTRACT

The present invention relates to an organic electroluminescent element and a display device exhibiting high emission efficiency and long life. The organic electroluminescent element contains a pair of electrodes having therebetween at least one constituting layer containing a phosphorescent light emitting layer, wherein one of the constituting layer contains a compound represented by Formula (1):

Formula (1)

wherein Z₁ represents an aromatic heterocyclic ring which may have a substituent; Z₂ represents an aromatic heterocyclic ring or an aromatic hydrocarbon ring both of which may have a substituent; Z₃ represents a divalent linking group or a single bond; and R₁₀₁ represents a hydrogen atom or a substituent.
